LOADING INSTRUCTIONS FOR AMIGA

SYSTEM INFORMATION:

Ballie Isle runs on Amiaa 500, 1000, 1500, 2000, 2500 and 3000.

IMPORTANT; Before loading Baille Isle for the first lime, make a back up copy of the game disks using AMIGA DOS (See Amiga manual)

If you have an Amiga 1000, jurn the computer on, then load Klastart, Battle Isle runs on Klastart I.2 or higher. Battle Isle is on Sikstart I.2 or higher. Battle Isle is on linee disks. The first disk contains the introduction and the hard disk installation program. You can skip the introduction sequence, and linser! the second disk in the Internal drive to load the game directly.

At the Workbench prompt, Insert the first or second Sattle Isle disk in the internal drive. If you have a second drive, you can insert the second or third disk in this drive. This will keep you from having to change disks.

Memory Configuration:

Chip-rom is the memory installed by Commodore in your Amiga. Fast-rom is the memory acided by the user (memory extension), or in certain cases by Commodore (Bx: The Amiga 2000, Work-bench 12, how 512 Dayles of Chip-rom and 512 Dayles of Fast-rom). To see which type of memory your Amiga bas, use the AVAILs -command in Amiga bas, see your Amiga manual).

- If you have
- 512 Kbytes of Chip-ram: The game will not use all the sound effects nossible.
- 512 Kbytes of Chip-ram + 512 Kbytes of Fast-ram: The game will not need to access the disk as frequently as in the previous configuration.
- 512 Kbytes of Chip-ram + 1 Mbyte of Fast-ram: Disk changes will be minimized, and going from the game to the menu will be faster.

To make Battle Isle load faver, you can reactivate fast-ram. To do so, keep the left mouse busion pressed while the game is loading. As soon as the screen turns black, you can release the button.

HAPD DISK INSTALLATION:

program toon.

NOTE: You need at least 512 Xbytes of Paskram, in calibrate to the 512 Kbytes of Chip-ram Installed in your companier, for run Battle ble from a hard disk. If you only have 512 Kbytes of Chip-ram, free should run Battle isle from floppy disks. Battle Isle will bank you fit you have 400 Kbytes of Chip-ram run; if you have 400 Kbytes of Chip-ram run.

STOP

Medie while that you have enough free momory available. If you may have 15 kbytes of chip-ram and an external drive, furn has computer off or unplug it (See your Amiga manuar). If the operation is not enough, close all windows before number admits are. To use the orns of the control of the operation of the control of th

INSTALLATION:

 Bool your Amiga from the hard disk, as usual. At the workbench prompt, insert the first Bailtle Isle disk in one of your drives, if you have a second drive you can insert the second disk in it.

 Open the disk by clicking on the icon disk. Two icons now appear: the main program and *INSTALL*, the installation program.

3. Run the installation program by double clicking on the installation icon.

4. Two options appear in the installation window. Enter the name of the drive used in the top option (usually DFO the default choice). If the disk is in one of the external drives, type in the name, (DFI:, DF2:, DF3:...). Press the * return * key to confirm your choice.

The bottom section of the window is the larget drive. The hard disk default choice is HDO. If you want to install Battle Isle on another partition, enter the name here.

To install Batile lale in a directory, type the directory name after the drive name. If the directory already exists, Battle late will automatically be installed. If it doesn't exist, the directory will be created.

To install Battle Isle in a sub-directory, separate directory names with a "".

After checking the options, you can proceed with the installation. The installation program has two options "PACKED" and "UN-PACKED" (and 2). The first option installs the program with packed tiles. The program will use tess disk space but loading time will be a tittle longer.

The second option installs the program unpacked on the hard disk, which decreases loading time. Battle lake takes approx. 5 Mbytes of hard disk space.

The last option guits the installation program.

occurr'

- ti you do not have an external drive, you will be prompted to change disks when necessary.
 A message will notify you when installation is completed suc-
- A message will notify you when installation is completed successfully.

 If installation is not successful, try to find out why an error occurred before installing again. There are several errors which might
 - a. You may have given incorrect Information in the Installation window: make the correction and begin the installation from step 4.
 - b. Cannot write on the hard disk: there may be corrupt sectors or information on the hard disk. See your hard disk manual to correct the error and start again from slep 1.
 - c. Cannol write on the hard disk: Not enough room on the hard disk. Delete any unnecessary programs You need 3 Mbytes (packed) or 5 Mbytes (unpacked) to Install Battlle Isle.
- d. The data cannot be read from the Battle Isle disk: Your disk may be laulty. Call your dealer or Electronic Arts or use your backup copy.

 If the installation is successful, you can begin Taighte Build iste. Any personal data you save will be saved on the baild disk Battle iste supports 68020/68030/68040 Turbo cards.

LOADING INSTRUCTIONS FOR ATARI

Bottle lete runs on ATAPI ST 520, 1040, STE 520, 1040, MEGA \$72.

SYSTEM INFORMATION

Turn on your computer and insert the tirst Battle Isle disk in the internat drive. Battle Isle will run automatically. A message might appear asking you to insert the second or third disk. If your computer has more than 512 Kovtes the disk swapping will be less frequent.

HARD DISK INSTALLATION

IMPORTANT: You can only install the program if your ATARI has at least 1 Mbyte of memory.

Ptease follow these instructions.

which will contain Battle Isla.

Step 1:

Boot your computer as usual from the hard disk and insert the first Baitte tste dtsk in one at your drives.

Step 2: Open the desired target drive (usually C) then create a directory

Step 3: Open the drive corresponding to the Battle Isle disk.

Step 4:

Copy all the files onto your hard disk as you usually do with other files. If this is a problem for you, refer to your ATARI ST manuat.

Step 5:

After having copied all the files from the first disk, remove the and insert the second.

Step 6:

Copy all the files of the second disk into the same directory then do the same operation with the third disk.

Step 7:

You can now run Baitle isle from your hard disk. All the data you will save will be copied onto it and loaded from it.

LOADING INSTRUCTIONS FOR IBM PC AND COMPATIBLES EGA/VGA.

Before you play Battle Isla, you need to install it on a hard disk or stoppy disks. The installation program . INSTALL . is on the tirsl disk.

Please follow these following instructions carefully.

Step 1:

Turn on the computer and let it boot as usual. Step 2:

Once the boating process is over, insert the first Ballie Isle disk in one of your drives.

Step 3:

Type the letter of the drive followed by a coton (ex: A:) and press the RETURN key.

Step 4:

Type . INSTALL . and press the RETURN key.

Step 5:

Once Battle Isle has loaded, you can proceed with the installation, indicate your choices using the mouse or the keyboard. The mouse must be Microsoli compatible, it your are in doubt, refer to your mouse manual.

The available target drives are displayed in the left window, both hard and floppy disk drives and their capacities are represented. Choose the appropriate drive. The version of Battle late being installed is indicated in the middle window; the most appropriate configuration will be chosen automatically.

If you install Battle Iste on a hard disk, you can choose one of several versions. Only one version at a time can be chosen for installation on a thopy disk.

The other two windows display the progress of the installation and wilt prompt you when disk changes are necessary. Follow the instructions on the screen carefully.

Stern 6:

When the installation is complete, run Battle isle by typing *Bi followed by RETURN. Battle tisle will automatically detect and adapt to your PC's configuration. To impose a specific configuration onto Battle isle, type your options after the name of the program followed by a blank space :

/EGA = Runs Battle Isle in 320 × 200 resolution in 16 colors if EGA mode is supported by your graphic card.

NGA = Runs Battle isle in 320 × 200 resolution in 256 colors if VGA mode is supported by your graphic card

/ADL = indicales that you are using an AdLib or AdLib compatible sound cord. This card must be correctly installed in your PC. See your sound card manual.

/SND = to only use the internal PC speakers.

if, for example, you want to run Battle isle in EGA mode with AdLIb sound, type in the following command and press RETURN; Bt /EGA ADL.

BATTLE ISLE

The options will only work if you choose them in the installation program.

If the message #19/9 (snough memory) appears, check your computer configurations. Remove any resident programs which take up too much theshory.

If the message «File not found» appears before or during the game, install the game again. A file wasn't installed correctly, perhaps due to a computer malfunction.

If you get any other error messages, contact your dealer or Electronic Arts.

INTRODUCTION

Battle Isle is a strategy war game not unlike chess. The rules of Battle Isle are riesuble, which will help he beginning strategis, as without sacrificing the complexity and clittle light of the game. As in chess, you must move a variety of pieces (units) with odd and a construction of the game. As in chess, you must move a variety of pieces (units) with your objective. To design your opportunities.

To do so you can either invade the enemy's headquarters or desiroy all the enemy's units. You must take into consideration the characteristics of each unit as well as the geography of the paying tield.

Battle fale is a realistic representation of modern war. All the elements of a modern war, from the construction of depots to the property of the construction of depots of the companies of the

OVERVIEW

Battle lale can be played by one or two players. Each player can take an active part in the manaswer at any time in the game. The game has two atternating phases: a MoVEment phase and an ACTON phase. The first player begins the game in the movement phase, while player two begins the game in action are swanned, and so only places). In the next turn the phases are swanned, and so only.

Each player represents the Chief of staffs, meaning that you give the orders, i.e. do the strategic planning for your armies. The action is carried out when both players have completed their turn and asked for a change in phase.

In Battle Isle, strategy and tactics, not brute force, determine the winner.

THE MANUAL

The weapons Handbook contains a picture and description of each unit. In addition to the functional descriptions, the Manual also offers strategic advice for the deployment of individual units. Information about units is displayed using the loons pictured Using the information provided by the icons will greatly enrich and improve your game.

Symbol or the strategic information

THE MENU

The BATTLE ISLE main menu appears after the game has loaded. Use the joystick to move to and click on the option desired. The main menu options are

- ; to start or continue a dame. : Sub-menu (see below)
 - : To load a previously saved game. : To gult the game.

The Options Menu

Mapcode: To choose a map by entering the corresponding code. Confirm your entry by pressing RETURN. You will be given new map codes each time you successfully complete a map mission

Setting : Sub-tness to set game parameters.

Player: To chacke your opponent (HUMAN or COMPUTER).
Note
Two player maps after this available when playing HUMAN /

OK: To return to the many menu.

ALL SHOPS give both players access to information on all buildings. HIDE SHOPS prevent you and your opponent from tooking in each other's buildings.

No htmst/4,8,16 turns: To choose the number of turns in the game. It you choose a firmled number of turns, the player who has the most units in the last turn wins.

BATTLE ISLE

Palette: To change unit colors from Red and Yellow to Green and Blue.

OR: To return to the trade then.

The disk Menu:

Load: To load a saved game. Choose the saved game using keys 0 to 9.

Battle: To load new maps from the add-on scenario disk
Rating: To display the four best scores for a given map.
Ok: To return to the OPTIONS menu.

During the game these options are also available:

The D key: Saves the current game. This option can only be used when both players have asked for a change in phase

The 2 key: toggles the sound effects offon.

The 5 key: toggles the music offon.

The ESC key: to quit the current game.

To quit, confirm this command by pressing the Y key.

THE SCREEN DISPLAY

The game screen is divided into two halves so that each player can move and scrott around the map independentiv. Only part of any one map is displayed at a time. (To see the entire map, use the alobal view function). The left half of the screen is player one, the right half is player two. When battles are engaged, or buildings taken, one half of the screen will show the location. of the action, while the other half will display the action taking place. The status tine at the bottom of the screen displays valuable information about the actions of your units and those of your opponent, as well as the number and experience level of your units. This status line witt also indicate any errors

THE BATTLE COMMANDS

Ballie Isle commands are executed with the toystick, uning the cursor command functions listed below.

The cursor appears in hexagon form on the man (highlightning one of the land hexagons). When you press the joystick fire bulton, the exit symbol + X + appears in the cursor limits. Keep the button pressed and move the joystick in one of the 8 possible directions to access the command functions, Each command function has a unique cursor symbot. Depending on the phase (ACTION or MOVEMENT) the cursor will indicate possible comands.

The Command Functions are:

 The Eye: Displays an overview of the entire map. Position the cursor, press the fire button and move the lovstick to the right. This global view function tels you assess your present situation, as well as that of your opponent, move auticity to a new location, and determine with units have not yet been given

orders in that turn. All roads are indicated in white. Examine the road network carefully to determine direct roules. The units are shown in their respective colors. Units turn black when they have been given

orders: this tets you check quickly it you have engaged att possible units in that turn.

The buildings are also in black on the map. The headquariers are represented by a small white H.

To move to a new tocation, move the square output to the desired area and press the fire button.

NOTE/ When you see a map for the first time, you should study the situation carefully using the globat view. Look tnto all buildings and transport units before making a decision. Only a large-scale strategy will lead you to victory.

2. The inventory: The (1) displays the inventory of a building or until. This function can only be used when the cursor is positioned over a building or irransport until. Use his function to evaluate the contents of a building or unit. Position the cursor were the building or unit you was a seventory. Press the fire building or unit you was a seventory. Press the fire building and move the levisitic to the self-

- 4. The MOVE command (crossed arrows) is accessible in the MOVEMENT phase when the cursor is positioned on one of your units. Use this function to order the unit to move. The route your unit will take then appears on the screen.
- 5. ACTION the (I) represents the action command. If is accessible in action phase when the cursor is positioned over one of your units. This function commands your unit to enter action. This order usually corresponds to an attack order against an enemy unit.

Cursor to look inside a

Cursor to obtain additional information

As when you are moving a unit, the possible attacks are displayed on the screen.

Changing phases (two way arrow). The two way arrow indicates that you have completed your turn and want to move to the next phase.

 Wrench is accessible when you are studying the contents of a building and you are in action.
 It shows that you want to leave the unit which is located under your cursor.

8. The hammer is accessible only when you are inside the building. By validing the option you can create new units.

THE GLOBAL MAP (ACCESS THROUGH THE EYE)

This map has loads of useful information for your strategic plans. All the roads are represented in white, which tells you have a global look oil the road network in their substances of the road network in their usual color. They lurn black when you give litem orders. This lefts you check quickly if you have engaged all the possible units. The headquarters are represented by a small white headquarters are represented by a small white

The global map tels you quickly access a precise area on the lerrain.

Move the square pointer on the destred area and press the fire button.

Note: When you see a map for the tirst time, you should study with care the situation using the global view. Look anyway in the buildings and Iransporters before taking a decision. Only a large-scale stratery will lead you to victory.

MOVING UNITS (CROSSED ARROWS)

To move a unit, position the cursor over one of your units. Press the joystick fire button and move the joystick away from you (up): the move symbol: with then

appear. When you release the fire button the range of the unit and possible destinations will be high-tighted.

Position the cursor on the desired.

elestination and press the fire butlon again. The roule your unit will take then appears on the screen. Press the fire button a second time to move the unit to the destract destination. Make sure the cursor is positioned on the destination square when you press the fire button the second time!

The range of the unit will appear again on the screen and you will have to choose again a destination. As soon as you have moved your unit, the computer clock in the moving function (black stripes

Indicate that a unit can move on a deligned area

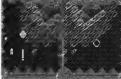

on the unit tell you that it's cloc-

ked).
You can also get units out of buttdings or transporters. Verity first he content of the buttding or transporter using the «INVENTORY»

command.
To teave just move the unit.
The range of units moving out of buildings is timited, as conveying

the troops to the battle field takes time. After moving a unit out, you will remain in inventory mode. To teave the building, use the exit (xXx) command.

Butidings, tike transport units, are represented on the map by target squares when you are within the range. Choose a butiding as your destination and your unit will go into the building and

fransport until. EEPIN MIND that your actions are only planned: your movements will not be executed and your units will not arrive at their destination until the change in plobes, in fact, your unit may destination until the change in plobes, the fact, your unit may the change in the which has differently moved in that turn, and then move the transport unit. Moving units into de transport unit which has directly invest in the change in the which has directly invest in the change in the which has directly invest in the change in the which has directly investigation.

ACTION

Position the cursor on one of your units and press the joystick fire button, As soon as the exit symbol appears on the cursor, move the joystick away from you (up): the exit symbol is replaced

All the targets in range a unit are on the screen

by an exclamation mask, Selectse the fire button to see the kärgles in your range. Possible attack kärgels will be highlighied. Choose the dealerd target by placing the classo over the target and pressing the fire button. When the unit records the target if is not possible to use this unit again once the target is waited.

Certain units can not be used for attack. A transport plane, for example, can reply to an attack, buil can not be used as an attack unil. You usually need to attack an opponent unit severot times before desiroying #1. This can be done in one turn, usino several of your unils. or

unit are on the screen in several turns,
The Depot builder is a special unit instead of attacking enemy
units, it builds depots. This is done the same way you attack a
unit. Potential building sites (instead of targets) are highlighted.

A Depot builder can only build ball a Depot at a lime. Either the Depot is built in two lume or two builders should work together. It is olten necessary to attack the enemy unal several time golder destroying it. During a large confrontation, it is often dilitable delermin units which have already been used to attach an enemy unit.

if you place the cursor on one of your units which is already engaged in battle, the target recorded by this unit will appear on the screen surrounded by a hexagon.

Content of a building of a transports

REPAIRING UNITS

Repairing units (wrench). The wrench is accessible in the action phase. Use it to repair damaged units in any building.

Position the carrier over the building containing damaged units and press the fire button. Move the lowestak set to the inventory symbol.

Position the cursor on the unit to be repatred, move the foyelick down (loward you) and press like line button. The unit will then appear with black stripes. The unit cannot be used while under repatr.

Repairing damaged units uses three units of energy, regardless of how serious lie damage may be, with the exception of the Depoi builders. If you do not have enough energy in the building, an error message will appear.

an error message win upperant strategic pathi. Repairing units is an important strategic pathi. It is especially useful to repair very strong units so that enemy can increase its effectiveness in battle by increasing the amount of battle experience gained.

PRODUCING UNITS

Producing units (hammer). The hammer is also only used inside buildings during the action phase. Use this function to produce new units in the factories.

As when repairing units, you make first inventory the foctory. Then position the cursor on our empty square reserved for ounit. Press the litre bullon and move the joystick lett. The hommer (production symbols will appear.

Release the tire button, to see which units can be produced with the energy available. On some levels, certain units can not be produced even if sufficient energy is available.

Choose the unit to be produced with the cursor, press the tire button, then move the joystick left white keeping the tire button pressed. Reteased the tire button.

The chosen unit will oppear covered with block stripes. The unit can be moved out of the foctory in the next movement phose.

CHANGING PHASE

The battle progression after the changing phase

After having made your tactical selection you must move on to another phase of the game, Place your cursor on an area not occupied by a building or trans-

porter. When you press the joyslick button while moving the loystick to the left, you see a two headed arrow appear. The symbol means that you must change phases. Release the joystick button to valid your choice, if you realise you have forgotten to program some lacticat choices, press tile faystick bution to cancet the changing phase The computer, will only accept the changing phase when the second player has also asked the finat confirmation which is valided by pressing the space-bar.

LOADING AND SAVING GAMES

Since most of the maps in Battle Isle take several hours to complete.

we have provided a loading and saving function.

LOADING
To load a game, go to the main menu, then to DISK menu and choose the «LOAD» aption. Then, you will have to choose a saved game between 0 and 9. For this, press the corresponding key. The program will ask you to insert your save game disk insert the disk in the hinternal drive. Hen press are year.

g lew seconds, your sayed game will be loaded.

SAVING

To save the current game, both players have to change modes. DO NOT press the space bar, press "D" (Disk) key. The prompt will then ask you to type in a figure from 0 to 9. You may have to insert a new disk. The program will recognise the correct disk automatically.

Ill pour port introlled illustion on a hard disk, you will not be casked to hash of a disk when locating or saving Bull il you are using an Amiga, you will atways have to insert the correct disk. Il you have boaded the game on a computer with more than 512 kbytes RAM, your Save game disk must be formated with AMGA-DOS and ramed 84. If your computer only has 512 kbytes use a new uniformated disk to save your game. Se sure to blow the Battle blad disk.

THE BUILDINGS

There are three main types of buildings. Headquarters, Factories, and Depots. All of which serve a variety of functions. All buildings should be supplied with energy to repoir or produce units. The energy units represent all ray materials.

They consist of strategic targets of the highest important and was should try to take then as autokly as possible.

Even if a building is under the control of your enemy you should try to take control of it. Only the soldiers are able to occupy buildings, thus, you should protect your infantry as necessary because without infantry you cannot occupy enemy buildings.

If you want to attempt to attack a depot or an enemy unit, you must prepar your attack carefully. In most cases the enemy has advantage in that it can repet its units immediatily. A superior number of books during others will usual tead to success. If the contemp is the contemp in the contemp is to success. If the careful is not a target number of books? The location of a structure is also very important because a depot or a factory not accessible from any states to other insylvation if you repermy is enactions.

or detect the enemy by taking its headquarters.

THE HEADQUARTERS (H)

The Hendquarters represent the primary enemy target. Each Hendquarters is indicated by a tuminous colored dome (red or yellow, bute or green). Occupy this hexagon with an intaintry detactment to capture the Hendquarters and with the game. On larger maps, lower of team which was only the odo quarter of the control of the

Sending troops towards the opponent's Headquariers may make the opponent remove units from the battlefield. You may sacrifice a lew units, but this manaeuvre will ease your task on other fronts.

The Factories, tike the Headquarters, are already on the map. Two luminous domes indicate the factory toyalty. Like the Headquarters, the Factory is captured by infantry entering on the entrance hexagon.

All the units in a factory or a depot at the time of capture fail into the hands of the assattant it both domes are grey, you can capture the factory by infantry tanding on the top hexagon.

When you have a choice of invading one of several factories, consider the following factors before making your decision

_

the luciory

-choose the factory attainable with the least loss -verify the units stored. Dorn be tempted by the number of units available, instead, look at the quality of the units within the scope of your global strategy and the strength of your opponent's units. For example, it is not very wise to take a factory containing three anti-directly systems, it the opponent has no values or values or you have your properties.

helicopters. THE DEPOTS (D)

Depots exist on some maps, but they can also be built using special units. In order to build a Depot, the ground must be clear: a Depot requires four hexagons and tevel grounds. Depot building sites on maps with uneven terrain are rare.

Start the action for the Depot builder the same way you start the allock action and possible depot building tales will be high-lighted. A Depot construction until builds one half of a depot or a fine. You can either use two units working together or build the depot in two turns. After building a Depot, the construction until does not have any more rew metierate to build additional depots. You can remedy this by sending the until to be reported in a factory or in your Headquarters.

A Depot you have built is yours immediatly, and does not need to be captured by your troops. Depots are supplied with energy during construction and can repoir units. You cannot, however, produce new units in Depots. Astde from these differences, Depots and (actories are coverned by the same rules.

On some maps there will be existing depots that you have to capture. You can also take possession of enemy Factories and Depots by capturing them with your intantiv.

On large maps, Depois represents important strategic bases which shorten supply time when set up near troops in combat. Supplying Depois with energy is not essential, it is much more important to supply factories with the crystal energy source

The depol

STRATEGIC USE OF BUILDINGS

As buildings are diso bases, they make very important strategic targets which you must occupy rapidly. Pen II a building is under your opponents control, you must by to opponent building so your injury. Without them you can not lake opponent buildings and contribed your poponent buildings.

In most cases, the opponent holding a building has the relative advantage of being dable to report his units on the some. Being superior in numbers during an attack usually leads to success. The experience of your own units plays on important role in bottle. A small number of units experienced in combal is usually more efficient flam of large number of vitesty units, avenil properly of the position of the position in the property of the prope

SUPPLYING BUILDINGS WITH ENERGY

Repairing and producing units uses energy. This energy represents all the raw materials necessary to build or repair units. Most buildings will be supplied with energy at the start of each game. This energy will be used during the game to repair and replace units.

Energy crystals are present on any maps. Collect linese energy crystals and supply your factories with them. To do so, move the crystals into a transport until when the transport until entry a building. The crystals will be unloaded and put on the credit of the building. Each energy crystal is worth 30 units of energial or the crystals will be unloaded and put on the credit of the put of the crystals will be unloaded to the crystals.

Typicatly, the crystats are found in difficult to reach the locations. You may need several turns before reaching them, which means hard your transport unit could easily be intercepted before reaching them to the turn the same that you opposed to been to any crystalt, as the repaining of units begins a decisive phase in the arms.

THE TERRAIN

The terrain is an impariant factor in Battle Isle During the movement of units, a change in terrain can shorten or lengthen the range and mobility of units. Many of the land units move taster on clear tand (ex: the road), while woods and mountains may present impossable obstacles.

Usually, the heavier a unit, the more timited its range and the more unlikely it is to pass through mountains.

The depth of water plays is an important factor for the naval units:

The large hardes of the plays and the more above) if indiver, the The large are sets, the incaper list range. Like land units, the range of naval and it units will be highlighted in MoVIzmen phase. The ferrain also plays an important role during the attack against the opponent. Units on the road are an esset range it may units the opponent. Units on the road are an esset reage in an units of a battle: the unit which is positioned higher suculty has the advantage.

COMBAT FORMATIONS

The middle unit

Although the strategic choices you make play a vilal role in Battle tsle, the result of battles between enemy units remains a major element of the game. Above all, it is the combat tormation which determines the positive or pecative outcome of a battle.

For the following explanations, the aggressors is the attacking unit and the adelenders the larget unit.

Combat termation is equally as important for the aggressor as for the defender.

For the gagressor II is advantageous to closely surround the

colender with as many units as possible, Each additional unit increases the lighting value. On the other hand, Ihis manoeuvre does not increase the lire power of long range units, which would be unfair to the delender. Such a formation is only successful in ballies where the attack is between adjoining hexagons.

The detender should attempt to prevent his troops from being surrounded. It will not be easy for the aggressor to bring his units around and behind the detender's units. Each additional detensive unit increases the defensive value of the formation.

This function is catted blocking: numerous units disparched on one area to hatt the progress of the aggresses.

During an attack using iong range shooting units, blocking and

surrounding are usetess A weak unit should not be used to surround a more powerful

unit. A transport unit, for example, will rarely damage a tank. Even if you surround the defender from all sides, you have to attack with powerful units. The same is true for blocking. A until with light armour wiff be damaged even if the baltle takes place under ideal conditions

The combat farmation

THE EXPEDIENCE SYSTEM

The quality of a unit depends not only on the fire power, the range, or the armament, but also on the experience gained by that unit to combat. Each time a unit is engaged in battle and succeeds in destroying at least one enemy unit.

The unit experience gained during battles is displayed on the stotus line (stors). The more experience a unit has, the more dangerous that unit is to the opponent, as experience plays an important role in the

outcome of a battle Try to gain sufficient experience with all your units. Don't attack powerful enemy units with weaker units of your own at the beginning of the game. In atmost all cases, this will only help

your opponent agin experience. If you attack a seriously damaged opponent unit, try to use a

unit powerful enough to completely destroy the enemy detachment. Your unit will then gain two additional experience points. As your accuracy improves with experience, your ability to dodge enemy fire improves also.

HOW TO GET IMMEDIATE INFORMATION

Battle iste is such a complex game that it is hard to remember everything about your lighting units and the situation in general, and so we have provided a function for calling up information at any point in the game.

INFORMATION ON FIGHTING UNITS

Ptace the question mark on the unit and press RETURN. The screen will show full data on that unit. Below the unit ID, you will see all the important technical data:

- Fire power and allack range against terrestrial targets.
- Fire power and attack range against airborne target.
- Fire power and attack range against marine target.
- Radius of action over the best terrain.
 Armour.
- a. Armour. It you call up information on enemy units, you wilt get the message "ACCESS DENIED". You are denied access to information on these units.

Halts insormation

GENERAL INFORMATION

If you wish to see the current status of the game, select the question mark with the cursor on any empty space between units A set of figures appears on the screen, with the following meanings:

General information

1. ROUND: The number of orders executed since the game started.

2. LEVEL: Levels 0 to 15 concern maps which are only available in two player games. Numbers 16 to 31 are for maps used when you are playing to 31 are 10.

against the computer.

3. MODE: Shows the central command post mode. You can only order your units to move it the word MOVE appears, otherwise, you must plan your

altack and execule other action.

4. NIGH is an abbreviation for "Highest Rating", the highest score ever on the current map.

ACTUAL designates the actual score.

6. The main window shows the balance of lorces between the players. You can compore the number of units, depois and factories between yoursell and your advesary. The fighting depois and factories in the third column do not belong to amone, they can be won by either player.

 TURN shows the number of orders you have given.
 LIMIT shows the maximum number of orders you can give.

PERFORMANCE ASSESSMENT

When you have been playing Battle file for some time, you will be less interested in the outcome of any particular battle than in your score. This is why there is a list of best players for each map. We shall describe the performance evaluation system to field you blow the root t

The best score is based on the defence values of all the units on the map. This is shown in the General information. The score drops when a triendly or enemy troop disappears. Counting the lold) number of units in this way means that your final score will drop it you win by destroying all line enemy units, but on the other hand, you will earn supplementary points.

This is how points are calculated

- * All units destroyed
- With hidden inventories
- * Not more than 4 orders * Not more than A orders
- * Not more than 16 orders
- Maximum score
- +500 points +100 points points x 4 32,500 points

GENERAL STRATEGY

There are two important factors which will decide whether you succeed or fail. One is your overall sixtlery, the other is your attitude within the combat space. Overall strategy means the whole set of buildings you take from must consider your lesses whole set of buildings you take from must consider your lesses criteria are weighted by the contents of the building and its tactical position. For example, your priority must be to take a well equipped building where your losses will be minimum. When choosing deposits to disck, consider he units in them and

Although buildings are large and important largets, your success will depend on the small battles. Your inferiority or superiority will depend on the positions of your units. The offensive or delensive strength of your group of units may be considerably increased if you can make the best use of the terroin.

Here are a few golden rules:

 Be careful of streets and flat, open ground. Your attacking strength will be greater but you will not be abte to defend yourself effectively.

2. Try to have inaccessible ground on both sides of your line of attack and in your rear so that you cannot be surrounded.

3. Try to have all the buildings for reporting buildings near you.

- Put your heavy battle tanks and units in the front tine, because they have good defensive capacity. Deploy anti-aircraft guns lo guard against air attack.
- The second line should have your long range armaments, it you do not have enough units, use the tong range units which can move over rough ground
 - In the third line, deploy the very long range armaments such as artitlery and SAM missiles.
 - Keep long range transport with a high carrying capacity to reserve. In desperate situations, you will be able to retreat with your remaining units

You must try to use the element of surprise whenever you can in battle. As soon as the enemy has guessed what you are up to, he will have the advantage.

EPILOGUE

Il you lollow this tactical, strategic and general advice, you should soon become a lirst-class strategist. Il you win too easily agains the computer, try to make the highest score. An extra disk will soon be available, to extend the scope of the game.

Thank you for choosing Battle Isle and spending time on playing It. It look seven people two years to write. If you enjoy the game, we shall be encouraged to try harder in the tuture. Looking forward to meeting you with our next game.

GLOSSARY

ATTACE MODE: The player can only give allack orders to his units, but he can report his units and produce others.

BLOCKS: These are defensive positions which increase the player's defensive strength during attacks.

CURSOR: The cursor normally shows the position of the next tetter on the screen, but in Battle Isle, if is a control instrument with which all the functions can be executed. It is like the mouse arrow, except that you move it with the joystick or keyboard.

DEPOT: This is a logistic depot where you can repot your fighting units.

UNIT: A group of up to six vehicles of the same type, represented by a single symbol on the tactical map.

FACTORT: Buildings where your lighting units can be repaired or built.

BATTLE: A ballle between opposing units.

NEADQUARTERS: A player's most important building. All units can be repoired at the Headquarters

INVENTORY: A player's full inventory of installations and equipment, You can call up the cantents of a building or transport.

HIGH START: An attacking position which considerably improves the units oftensive strength

MOVE MODE: When in this mode, the player can only move his units.

RATING: On completion of a game, the winner's score reflects how well be played the game. The lop four scores on each map are saved.

RADIUS OF ACTIOH/RANGE: The maximum distance which an unit can cover over "ideal terrain."

TACTICAL OVERVIEW: This shows a cross section through the

whole map, with all special features of the terrain. Each hexagon represents one type of terrain.

ATTACK RANGE: The maximum distance, beyond which the unit

ATTACK RANGE: The maximum distance, beyond which the ur cannot attack.

STORE: See inventory.
